

Welcome to QIT Company!

AI AGENTS & BUSINESS AUTOMATION

Purpose-built for your business.

Practical AI solutions that connect your software, support your people and reduce repetitive work.

Practical AI. Built for your team.

We turn AI into useful business tools, connected to your information and existing software, with clear boundaries and human oversight.

01 AI AGENTS

Purpose-built assistants that find relevant information, use connected tools and carry out tasks within the permissions you define.

- Customer and sales support
- Internal knowledge assistants
- Tool-connected task execution

02 AUTOMATION

Connected workflows that move information between your systems, reduce repetitive steps and keep the right people involved.

- Document intake and routing
- CRM and ERP integrations
- Review and approval steps

At QIT Company

We start with a useful business case and design the right solution around it.

Our AI services include

- Custom AI agents
- Customer support assistants
- Internal knowledge assistants
- Document and workflow automation
- Business system integrations

Our team

We combine software development and AI integration to deliver practical tools connected to your websites, applications and business systems.

WE OFFER

AI services designed around everyday business needs, from answering questions to connecting tools and coordinating tasks.

1. Custom AI agents

We build assistants that retrieve company knowledge, use approved tools and support multi-step tasks with defined roles and escalation rules.

2. Customer and sales support

We create assistants for product questions, lead qualification and follow-up preparation, with handover to your team when needed.

3. Knowledge and document tools

We connect approved company content for internal questions and build workflows to extract, classify and summarize documents for review.

4. Connected business workflows

We integrate AI with websites, apps, CRM and ERP systems, including Odoo where relevant, to coordinate tasks and reduce duplicate entry.

5. Deployment and improvement

We deploy agreed use cases, monitor output quality and system behavior, and provide maintenance, user guidance and ongoing refinements.

OUR PROCESS

Start with a focused use case. Build on what works.

A collaborative approach, with clear access rules, testing and human review.

1. Discovery and priorities

We identify a useful business case, review your current workflow and agree on the scope, success measures and project priorities.

2. Workflow and access design

We map data sources, tools, permissions and human approval points before defining how the assistant or workflow should operate.

3. Build and integration

We develop the required components, connect approved business tools and refine the experience through regular reviews with your team.

4. Evaluation and pilot

We test representative tasks, incorrect responses and edge cases, then run a focused pilot and prepare your team for daily use.

5. Launch and ongoing support

We deploy the agreed solution, monitor quality and usage, and provide maintenance and refinements as your needs evolve.

Useful automation. Clear boundaries. Human oversight.

THANK YOU for Choosing QIT Company!

Thank you for considering QIT Company for your AI and automation needs.

Useful AI. Your team in control.

Start with one high-value workflow. We help you connect the right information and tools, test the solution and expand as your needs evolve.

Let's put AI to work.

Tell us where your team loses time. We will help identify a practical starting point.
